

OUR BEST-IN-CLASS, PROPRIETARY PRICING EVENT PLATFORM

ECX MARKETPLACE

Online bidding platform that transforms the way you buy energy.

Customize contract-term length, pricing structure, green power mixes, segmentation by region and load time.

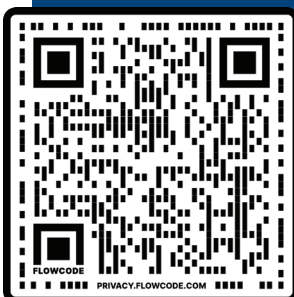

Test multiple pricing events simultaneously to get real-time results.

ECX Marketplace is the latest online platform developed by the pioneers of the reverse auction technology with the capability to manage complex energy products and pricing structures.

The platform design compels our extensive network of energy suppliers across America to deliver the lowest price as they compete to outbid the competition. The format shortens the amount of time suppliers can hold their bids open, which in turn reduces the supplier risk premiums embedded in the price, resulting in lower bids.

With an emphasis on transparency, our real-time marketplace allows for instantaneous extraction of comprehensive bid reports ready for evaluation, so you can **get in control of your company's energy spend.**
